When buying an SD card or TF card:

1. The transfer speed of the memory card must be **CLASS 4**

class 6 or class10 cards may not be written into the project, so it is not recommended to use them

2. The capacity of memory card is preferably **4G~8G**, not more than 16G, otherwise do not read the card

3. The file system of the memory card must be **FAT32**, and the distribution unit size is **4096** bytes. If the online card selection is not clear about the transfer speed of the card, you can refer to the following figure:

If it is the transfer speed of **CLASS 4** in the figure, then there will be a circle on the card with a word **4** written inside. If there are other numbers in the circle, it is not recommended to buy.

How do I check if the file system of the card is **FAT32**?

The first step: put TF card into the card reader and insert it into the U disk interface of the computer;

Step 2: Click on my computer, find the inserted USB flash drive, right click properties, check whether it is FAT32 file system format Step 3: if not, right click on the USB flash drive, click format, according to the following configuration:
